Ohio colleges to offer computational 'virtual minor'

Business Courier of Cincinnati - August 29, 2007

The University of Cincinnati is one of nine Ohio campuses that will be offering a "virtual minor" in computational science beginning this fall.

The program will be coordinated by the Ralph Regula School of Computational Science, a statewide virtual school launched by the Ohio Supercomputer Center, the Ohio Board of Regents, the Ohio Learning Network and Ohio colleges and universities, according to a news release.

Computational science is the application of computing, and supercomputing in particular, to solve complex science and engineering problems by creating mathematical models that simulate processes. Weather forecasting computer models are an example of the science.

Courses will be taught by professors at the participating schools which, beside UC, include Wright State University, Sinclair Community College, Capital University, Kent State University, Ohio State University, Wittenberg University, Central State University and Columbus State Community College.
